

Hot Spots and the Depth of Mantle Plumes

Montelli, G., S. H. Nolet, F.A. Dahlen, G. Masters, E.R. Engdahl, S.-H. Hung, Finite-frequency tomography reveals a variety of plumes in the mantle, *Science* 303, 338-343, 2004.

Anderson, D.L and G. R. Foulget, <http://www.mantleplumes.org/> (website that supports views that hotspots do not have deep origin, lots of links to individual papers)

Seismic Gap Hypothesis

McCann, W.R., S.P. Nishenko, L.R. Sykes, J. Krause, Seismic gaps and plate tectonics: seismic potential for major boundaries, *Pure Appl. Geophys.*, **117**, 1082-1147, 1979.

Kagan, Y.Y. and D.D. Jackson, Seismic gap hypothesis: ten years after, *J. Geophys. Res.*, **96**, 21,419-21,431, 1991.

Nishenko, S.P. and L.R. Sykes, Comment on "Seismic gap hypothesis: ten years after" by Y.Y. Kagan and D.D. Jackson, *J. Geophys. Res.*, **98**, 9909-9916, 1993.

Jackson, D.D. and Y.Y. Kagan, Reply, *J. Geophys. Res.*, **98**, 9917-9920, 1993.

Kagan, Y.Y. and D.D. Jackson, New seismic gap hypothesis: five years after, *J. Geophys. Res.*, **100**, 3943-3959, 1995.

New Madrid Seismic Risk

Hough, S.E., J.G. Armbruster, L. Seeber, and J.F. Hough, On the Modified Mercalli Intensities and Magnitudes of the 1811-1812 New Madrid, Central United States, earthquakes, *J. Geophys. Res.*, **105**, 23,839-23,864, 2000.

Newman, A., S. Stein, J. Weber, J. Engeln, A. Mao and T. Dixon, Slow deformation and lower seismic hazard at the New Madrid Seismic Zone, *Science*, 284, 619-621, 1999.

Stein, S., J. Tomasello, and A. Newman, Should Memphis Build for California's Earthquakes? *EOS Trans. AGU*, **84**, 177, 184-185, May 13, 2003.

and see FORUM comments on Stein EOS article in July 22, 2003 *EOS Trans. AGU*.

VAN Earthquake Prediction

search on web and look at May 27, 1996, issue of Geophysical Research Letters.

Keilis-Borok Earthquake Predictions

(not much in scientific literature but Google search will find lots of articles in the press)

Strong versus Weak Faults

Scholz, C., Evidence for a strong San Andreas Fault, *Geology*, **28**, 2, 163-166, 2000.

Hardebeck, J.L. and E. Hauksson, Crustal stress field in southern California and its implications for fault mechanics, *J. Geophys. Res.*, **106**, 21,859-21,882, 2001.

Chery, Jean, M.D. Zoback, and R. Hassani, An integrated mechanical model of the San Andreas fault in Central and Northern California, *J. Geophys. Res.*, **106**, 22,051-22,066, 2001.

Townend, J., and M. Zoback, Implications of earthquake focal mechanisms for the frictional strength of the San Andreas fault system, Geological Society Special Publications, vol. 186, pp.13-21, 2001.

Brune, J.N., and W. Thatcher, Strength and energetics of active fault zones, International Handbook of Earthquake and Engineering Seismology, volume 81A, Int. Assoc. Seismol. Phys. Earth Int., 569-588, 2002

Possible Slow Precursor to Oceanic Transform Earthquake

McGuire, J.J., P. Ihmler, T.H. Jordan, Time-domain observations of a slow precursor to the 1994 Romanche transform earthquake, *Science*, **274**, 82-85, 1996.

Abercrombie, R. and G. Ekstrom, Earthquake slip on oceanic transform faults, *Nature*, **410**, 74-77, 2001.

Earthquake Initiation

Ellsworth, W.L. and G.C. Beroza, Seismic evidence for an earthquake nucleation phase, *Science*, **268**, 851-855, 1995.

Ellsworth, W.L. and G.C. Beroza, Observation of the seismic nucleation phase in the Ridgecrest, California, earthquake sequence, *Geophys. Res. Lett.*, **25**, 401-404, 1998.

Kilb D., and J. Gomberg, The initial subevent of the 1994 Northridge, California, earthquake -- is earthquake size predictable?, *Journal of Seismology*, **3**, 409-420, 1999.

Mori, J.J. and H. Kanamori, Initial rupture of earthquakes in the 1995 Ridgecrest, California sequence, *Geophys. Res. Lett.*, **23**, 2437-2440, 1996.

Depth Extent of Iceland Plume

Shen et al., Seismic evidence for a lower-mantle origin of the Iceland Plume, *Nature*, **395**, no. 6697, pp. 62-65, 03 Sep 1998.

Foulger et al., The seismic anomaly beneath Iceland extends down to the mantle transition zone and no deeper, *Geophys. J. Int.*, **142**, F2-F5, 2000.

Pritchard et al., Constraints on a plume in the mid-mantle beneath the Iceland region from seismic array data, *Geophys. J. Int.*, **143**, 119-128, 2000.

Shen et al., Seismic evidence for a tilted mantle plume and north-south mantle flow beneath Iceland, *Earth and Planetary Science Letters*, vol. **197**, no. 3-4, pp. 261-272, 15 Apr 2002.

Allen et al., Plume-driven plumbing and crustal formation in Iceland, *Journal of Geophysical Research, B, Solid Earth and Planets*, vol. **107**, no. 8, 19 pp., 10 Aug 2002.

Core-Mantle Boundary Topography

Morelli, A. and A.M. Dziewonski, Topography of the core-mantle boundary and lateral homogeneity of the liquid core, *Nature*, **325**, 678-683, 1987.

Rodgers, A. and J. Wahr, Inference of core-mantle boundary topography from ISC PcP and PKP traveltimes, *Geophys. J. Int.*, **115**, 991-1011, 1993.

Possible Slip Deficit in Southern California

Stein, R. S. and T. C. Hanks, $M > 6$ Earthquakes in Southern California during the Twentieth Century: No Evidence for a Seismicity or Moment Deficit, *Bull. Seismol. Soc. Amer.*, **88**, pp. 635-652, 1998.

Jackson, D. D., The case for huge earthquakes (Opinion), *Seismol. Res. Lett.*, **67**, 3-5, 1996.

WGCEP, Working Group on California Earthquake Probabilities, Seismic hazards in southern California: Probable earthquakes, 1994-2014, *Bull. Seismol. Soc. Amer.*, **85**, 379-439, 1995.

Retrofitting Issues for Unreinforced Masonry Buildings in California

(Google search will find lots of material)
